

S3 Fig. Forest plots of pooled analyses of 1-year local control rate (A), overall survival rate (B), progression free survival rate (C), and rate of complications with grade ≥ 3 (D). p-values are two-tailed p-values from Egger's test. Duval and Tweedie's trim and fill was performed for complication rate pooled analysis, yielding adjusted value of 5.1% (95% confidence interval [CI], 2.9% to 8.8%) (original value, 3.1%; 95% CI, 1.5% to 6.6%).
