

S1 Fig. Time to onset of first treatment-emergent hematologic adverse events and duration of treatment-emergent hematologic adverse events by episode and grade (Asian safety population). MedDRA ver. 20.0. Adverse event grades are evaluated based on National Cancer Institute Common Terminology Criteria for Adverse Events, ver. 4.03. Maximum grade of cluster/preferred term is considered for presenting descriptive statistics under maximum grade of cluster/preferred term section. For duration of adverse drug reactions by grade, all episodes with grades within the range are used in the calculation of descriptive statistics. n, number of patients with ≥ 1 treatment-emergent adverse event.
