S5 Fig. Kaplan-Meier curves with log-rank test for survival after recurrence according to the status of receiving adjuvant chemotherapy and chemotherapy after recurrence in the Y-cohort (A) and in the S-cohort (B). Adj, adjuvant chemotherapy; CAR, chemotherapy after recurrence; n, number of patients. In the subgroup analysis of MSS/pMMR tumors, a similar finding was observed in the overall cohort (log-rank p < 0.001) (Table 4, Fig. 1B) and each cohort (log-rank p < 0.001 and p < 0.001 in the Y-cohort and S-cohort, respectively) (S6A and S6B Fig.).
