S4 Fig. Knockdown of PRDX2 decreased invasion and increased sensitivity to 5-fluorouracil (5-FU) in intrahepatic cholangiocarcinoma (ICC) cells. (A) Transwell invasion experiment and quantitative results of HuCCT1 cells. (B) MTT assay showed that the IC$_{50}$ of 5-FU was decreased in the siPRDX2 group. (C) Flow cytometry diagram of cell apoptosis in the siPRDX2 group and quantitative results. Scale bars=100 μm. ***p < 0.001.
