

S11 Fig. Comparison of receiver operating characteristic (ROC) analysis and Kaplan-Meier survival curves of locally advanced or metastatic pancreatic cancer patients in training set. (A) Data compares fibrinogen level ≤ 3.23 vs. > 3.23 ($p < 0.001$). (B) Data compares albumin ≤ 38.85 vs. > 38.85 ($p < 0.05$). (C) The area under the ROC curve indicates the diagnostic power of fibrinogen-to-albumin ratio (FAR) was the most powerful. Fib, fibrinogen; ALB, albumin.
