

S3 Table. Pathway coefficients of structural equation model (n=333)

Constructs		Estimates	
Dependent variable (endogenous)	Independent variable (exogenous)	Standardized estimate (β)	p-value
FCRI	Age at diagnosis	-0.224	< 0.001
	Time since diagnosis	-0.038	0.485
	Recurrence	0.081	0.132
Depression	FCRI	0.471	< 0.001
Emotional Function	FCRI	-0.531	< 0.001
	Depression	-0.231	< 0.001
QoL	Emotional Function	0.366	< 0.001
	Depression	-0.334	< 0.001
	FCRI	-0.108	0.021

FCRI, fear of Cancer Inventory; QoL, quality of life. Negative values indicate a negative association between dependent and independent variables, and positive values indicate positive associations. Standardized estimates in boldface are significant.
