

S3 Table. Inter-reader agreement of imaging characteristics

Imaging finding	Inter-reader agreement
Tumor size ^{a)}	0.98 (0.98-0.99)
Number of involved segments ^{a)}	0.95 (0.93-0.97)
Tumor margins	0.52 (0.33-0.70)
Infiltrative appearance	0.60 (0.41-0.79)
Absence of APHE	0.72 (0.53-0.91)
Rim enhancement	0.53 (0.34-0.72)
Washout appearance	0.70 (0.52-0.89)
Intratumoral necrosis	0.72 (0.53-0.91)
Peritumoral bile duct dilatation	0.61 (0.42-0.80)
Tumor-in-vein	0.83 (0.65-0.99)
Multifocality	0.76 (0.57-0.95)

APHE, arterial-phase hyperenhancement. ^{a)}Intraclass correlation coefficients were calculated for continuous variables, such as tumor size and number of involved segments, whereas kappa values were calculated for categorical variables.
