

S7 Fig. Bland-Altman plot for viable tumor (VT, %) rating. The horizontal axis represents the mean VT (%), and the vertical axis represents the deviation of the rated VT (%) (rated VT (%)–mean VT (%)) of each observer. Observers are color-coded, with observer A in red, B in green, and C in blue. The solid line represents the mean deviation of each observer, indicating systemic differences. The dotted line shows ± 2 standard deviation (SD) from the mean deviation of each observer.
