
S14 Fig. Effect of drinking status on gastric cancer (GC) incidence stratified by polygenic risk score for GC (PRS-GC), PRS for alcohol consumption (PRS-Alcohol), and their combination according to sex. (A) male and (B) female. PRS-GC was dichotomized into low and high based on the 70th percentile, while PRS-Alcohol was dichotomized based on the 50th percentile. Drinking status was categorized into non-to-light and heavy drinkers. CI, confidence interval; HR, hazard ratio.
