
S9 Fig. Evaluations of polygenic risk score for gastric cancer (PRS-GC) and PRS for alcohol consumption (PRS-Alcohol) in the test set. (A) Odds ratios and 95% confidence intervals of GC according to PRS-GC quartiles. (B) Beta coefficients and 95% confidence interval of alcohol consumption (g/day) according to PRS-Alcohol quartiles. (A) and (B) were adjusted for age, sex, and principal component (PC) 1-4.
