
S5 Fig. Sankey diagram of original diagnosis and reclassification of included patients. Sixteen of 125 hepatoblastomas (HB; 12.8%) and five of 22 pediatric hepatocellular carcinomas (HCC; 23%) were reclassified as malignant hepatocellular neoplasms, not otherwise specified. One hepatocellular adenoma (HCA) of β-catenin-activated type was reclassified as hepatocellular carcinoma arising in hepatocellular adenoma.
