

S6 Table. 5-year disease-free survival (DFS) of open radical hysterectomy (ORH) and minimally invasive radical hysterectomy (MIS) according to preoperative conization in patients with ≥ 2 cm tumor size

	P1 ^{a)}			P2 ^{b)}		
	No-conization	conization	p-value	No-conization	conization	p-value
ORH	20/30 (66.7)	12/13 (92.3)	0.087	77/86 (89.5)	35/37 (94.6)	0.329
MIS-RH	32/47 (68.1)	33/37 (89.2)	0.027	32/39 (82.1)	18/19 (94.7)	0.221

Values are presented as number (%). ^{a)}P1 (learning period), 0-30 cases of open radical hysterectomy (ORH) or 0-60 cases of minimally invasive radical hysterectomy (MIS-RH), ^{b)}P2 (skilled period), > 30 cases of ORH or > 60 cases of MIS-RH.
